

## Precision Linear Motion Platform

### FEATURES

- High speed
- 300mm Travel
- Linear Motor
- Optical limit switches with home
- High resolution linear encoder
- Recirculating ball linear ways
- Side seals
- Extended life trackless cable

The LM3 Series stages are designed for a variety of applications. This compact low profile linear motor stage is built for high duty cycles and long life and attains high velocities for factory automation and semiconductor processing equipment. This stage has exceptional levels of accuracy, repeatability, flatness and straightness. Recirculating ball linear ways and the linear motor offer extremely smooth operation and velocity control. The trackless cable minimizes vibrations and increases service life. Side seals and a hard cover make it an excellent choice for dirty environments. The LM3 Series stages can be stacked to create XY motion.

The encoder will output one index pulse near center travel. This pulse is highly repeatable and can be used upon power-up to find an absolute position to use for further measurements.

Two limit switches are provided at the ends of travel. The limit switches will be pulled low throughout the travel range of the stage. The output will swing to high-impedance at the end of travel and remain high-impedance until the mechanical limit of the stage is reached.
