

Precision Linear Motion Platform

FEATURES

- High speed
- 150mm Travel
- Precision ground ball screw drive
- Optical limit switches with home
- High resolution rotary encoder
- Recirculating ball linear ways
- Side seals

The LM2 Series stages are designed for a variety of applications. This compact low profile linear stage is built for high duty cycles and long life and attains high velocities for factory automation and semiconductor processing equipment. This stage has exceptional levels of accuracy, repeatability, flatness and straightness. Recirculating ball linear ways and the precision ground ball screw offer extremely smooth operation and velocity control. Side seals and a hard cover make it an excellent choice for dirty environments. The LM2 Series stages can be stacked to create XY motion.

A home switch is provided near center mechanical travel and a limit switch at each end of travel. The encoder will output one index pulse per revolution of the motor. This pulse is highly repeatable and can be used in coordination with the home switch to find an absolute position after power-up.

The limit switches will be pulled low throughout the travel range of the stage. The output will swing high at the end of travel and remain high until the mechanical limit of the stage is reached.
